RESULTATS DE L'ENQUÊTE MARAÎCHÈRE

CAMPAGNE 1997 - 98

Novembre 1999

Introduction

Le Burkina Faso a depuis 1990 mis en place un dispositif annuel de collecte de données sur le maraîchage.

Il est à noter que ce processus de collecte a connu deux périodes. En effet, l'enquête a été exécutée pour la campagne 1990/91 sur la base d'un recensement général des villages ayant des sites maraîchers. Ce recensement a permis la constitution de la base de sondage pour l'exécution de l'enquête en 1991/92 par sondage à deux degrés (voir résultats campagne maraîchère 1990/91).

Avec les préparatifs et l'exécution du recensement agricole de 1993/94 (ENSA) , l'enquête maraîchère n'a pu être conduite pour les campagnes 1992/93 et 1993/94.

De ce fait, pour la poursuite des opérations annuelles de collecte et compte tenu de la très forte fluctuation de la filière, il a été procédé pour la campagne 1994/95 à un recensement des sites et des villages maraîchers; l'objectif étant la mise à jour de la base de sondage.

1.1 Objectifs

L'enquête vise la collecte des données relatives :

- 1- Aux caractéristiques générales des sites d'exploitation : occupation des terres, superficie, équipements d'exploitation (ex. équipement d'irrigation, source d'eau, etc.) et cultures pratiquées.
- 2- Aux caractéristiques des exploitants : âge, sexe, encadrement, assistance et profil socio-économique.
- 3- A l'exploitation : utilisation des intrants, mode d'approvisionnement, superficies exploitées, rendement, production, circuit de commercialisation , prix et chiffre d'affaire.

1.2 Méthodologie

L'enquête est faite par sondage à deux degrés.

1.2.1. Champ de l'enquête

L'enquête couvre l'ensemble du territoire national. L'univers statistique est la province

1.2.2. Base de sondage

La base de sondage au premier degré est constituée de la liste des villages (Unités Primaires) maraîchers obtenus à partir du recensement maraîcher de la campagne 1994/95 soit 1130 villages retenus comme village abritant une activité maraîchère.

Les villages retenus dans la base de sondage sont les villages dans lesquels se pratique l'activité maraîchère avec une superficie totale des sites exploitées au moins supérieure à 750 m².

Pour la province du Sanguié ou le maraîchage est une activité fortement répandue, l'UP (Unité Primaire) est défini autrement. C'est ainsi que pour les gros villages à intense activité maraîchère, il a été procédé à la dislocation du village en considérant le quartier comme UP. Cependant, nous emploierons abusivement le mot village pour désigner les UP.

Au second degré, la base de sondage est constituée de la liste exhaustive des maraîchers (Unités Secondaires) des villages échantillons .

1.3. L'échantillon

L'échantillon tiré au premier degré pour la campagne 1996/97 est composé de 390 villages obtenus par la méthode du tirage aléatoire systématique à probabilité inégale; proportionnellement à l'effectif des maraîchers et avec remise. A la fin des travaux de collecte, de dépouillement et de traitement, 341 villages échantillons ont servi à l'estimation des résultats.

Dans les 341 villages échantillons touchés, le recensement exhaustif des maraîchers a permis de dénombrier 37464 maraîchers constituant la base de sondage au second degré. De cette base de sondage, 6812 maraîchers échantillons ont été tirés; selon le tirage aléatoire simple à probabilité égale. Soit 20 maraîchers échantillons par village quelque soit le nombre de maraîchers dans le village. Dans les cas où le nombre de maraîchers n'atteint pas 20 dans le village, l'ensemble des maraîchers est systématiquement inclus dans l'échantillon.

| Degré | Prévision | réalisation |
|----------------------------|-----------------|-----------------|
| Premier degré (villages) | 390 villages | 341 villages |
| second degré (maraîchers) | 7800 maraîchers | 6812 maraîchers |

1.5. Les résultats

1.5.1 Méthodes d'estimation

i : indice d'UP

j : indice d'US

n : nombre de UP (villages) échantillons

m_i : nombre d'US échantillons (maraîchers) de l'UP i .

m : nombre d'US échantillons dans l'univers

M_i : nombre d'US observé dans l'UP i pour la campagne présente

M_{i0} : nombre d'US recensé dans l'UP i pour la campagne 1994/95

M_0 : nombre d'US dans l'univers pour la campagne 1994/95

$A_i = M_{i0} / M_0$: Probabilité d'apparition de l'UP i .

y_{ij} : valeur observée de la caractéristique Y de l'US j dans l'UP i .

y_i : valeur observée de la caractéristique Y dans l'UP i

\bar{p} : estimateur du total de Y

\bar{y} : estimateur de la moyenne de Y

| | Unité d'enquête : UP | Unité d'enquête : US |
|---------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Estimateur du total | $\bar{p} = \frac{1}{n} \sum_{i=1}^n \left(\frac{1}{A_i} y_i \right)$ <ul style="list-style-type: none"> • effectif des maraîchers • superficie brute des sites • nombre de motopompes • ... etc. | $\bar{p} = \frac{1}{n} \sum_{i=1}^n \left(\frac{1}{A_i} \frac{M_i}{m_i} \sum_{j=1}^{m_i} y_{ij} \right)$ <ul style="list-style-type: none"> • superficie exploitée par culture • production par culture • nombre d'actif • ... etc. |
| Estimateur de la moyenne | | $\bar{Y} = \frac{1}{m} \sum_{i=1}^n \left(\sum_{j=1}^{m_i} y_{ij} \right)$ <ul style="list-style-type: none"> • rendement par culture • prix par culture • ... etc. |

1.5.2 Publication

Les résultats de cette série d'enquêtes ont été publiés dans le mois de décembre 1999 et concerne :

- les données du recensement maraîcher de 1994/95
- les données de l'enquête par sondage de la campagne 1995/96
- les données de l'enquête par sondage de la campagne 1996/97
- les données de l'enquête par sondage de la campagne 1997/98

En effet, par soucis de rigueur de la méthodologie et de la cohérence des données, la publication des résultats du recensement de 1994/95 et de l'enquête de 1995/96 a été différé dans le but de les comparé aux chiffres de la campagne 1996/97.

La publication des résultats de ces trois enquêtes est intervenue en quatre volumes de 179 tableaux. Les données publiées reprennent l'information liée :

- 1- Aux caractéristiques générales des sites exploités: Occupation des terres, superficies, équipements des exploitations (ex. Equipement d'irrigation, source d'eau) et cultures pratiquées.
- 2- Aux caractéristiques des exploitants : âge, sexe, encadrement et profil socio-économique et enfin à ceux de l'exploitation : utilisation des intrants, mode d'approvisionnement des intrants, superficies exploitées, rendements, production, commercialisation, prix et chiffre d'affaire.

1.6 . Opération de collecte

1.6.1. Dispositif de collecte

le dispositif de terrain se résume comme suit pour la campagne 1996/97:

| PROVINCE | nombre de villages échantillons | nombre de maraîchers échantillons | Nombre d'enquêteurs | Nombre de contrôleurs |
|--------------|---------------------------------|-----------------------------------|---------------------|-----------------------|
| BAM | 18 | 360 | 6 | 1 |
| BAZEGA | 21 | 420 | 7 | 1 |
| BOUGOURIBA | 12 | 240 | 4 | 1 |
| BOULGOU | 21 | 420 | 7 | 1 |
| BOULKIEMDE | 9 | 180 | 3 | 1 |
| COMOE | 15 | 300 | 5 | 1 |
| GANZOURGOU | 9 | 180 | 3 | 1 |
| GNAGNA | 12 | 240 | 4 | 1 |
| GOURMA | 15 | 300 | 5 | 1 |
| HOUET | 18 | 360 | 6 | 1 |
| KADIOGO | 9 | 180 | 3 | 1 |
| KENEDOUGOU | 9 | 180 | 3 | 1 |
| KOSSI | 18 | 360 | 6 | 1 |
| KOURITENGA | 6 | 120 | 2 | 1 |
| MOUHOUN | 18 | 360 | 6 | 1 |
| NAHOURI | 6 | 120 | 2 | 1 |
| NAMENTENGA | 6 | 120 | 2 | 1 |
| OUBRITENGA | 12 | 240 | 4 | 1 |
| OULDALAN | 12 | 240 | 4 | 1 |
| PASSORE | 6 | 120 | 2 | 1 |
| PONI | 12 | 240 | 4 | 1 |
| SANGUIE | 24 | 480 | 8 | 1 |
| SANMATENGA | 12 | 240 | 4 | 1 |
| SENO | 15 | 300 | 5 | 1 |
| SISSILI | 6 | 120 | 2 | 1 |
| SOUM | 15 | 300 | 5 | 1 |
| SOUROU | 15 | 300 | 5 | 1 |
| TAPOA | 12 | 240 | 4 | 1 |
| YATENGA | 21 | 420 | 7 | 1 |
| ZOUNDWEOGO | 6 | 120 | 2 | 1 |
| Total | 390 | 7800 | 130 | 30 |

Notons que pour la campagne 1995/96 la taille de l'échantillon au premier degré était de 290 villages. Les enquêteurs sont ceux utilisé pour l'enquête permanente agricole et compte tenu des dispositions ayant permis l'augmentation du nombre de ces enquêteurs, il a été procédé à l'augmentation de la taille de l'échantillon qui est alors passé de 290 à 390 villages.

1.6.2 Difficultés rencontrées

1.6.2.a : Personnel et période d'exécution

Comme ci-dessus mentionné, l'enquête maraîchère utilise le même personnel que l'enquête permanente agricole. L'activité maraîchère commence généralement au mois d'octobre et se terminant au mois de mars ou avril de l'année suivante. Compte tenu de l'impossibilité des enquêteurs de mener deux activités de front au cours de la même période, l'enquête maraîchère commence au mois de janvier donc avec trois mois (3) de retard par rapport au démarrage de la campagne maraîchère d'où la nécessité de poser des questions rétroactives aux maraîchers pour rattraper l'information des trois (3) mois écoulés.

Ceci a pour conséquence une perte de la qualité des enregistrements du fait de l'imprécision qu'occasionnent ces observations ex post pour certaines variables. Pour ces paramètres, des consignes particulières sont données aux enquêteurs consignés dans les manuels de l'enquêteur.

1.6.2.b : Base de sondage

Compte tenu de la forte instabilité de la filière maraîchage, un certain nombre de difficultés ont été observées :

- le déplacement de maraîchers d'un village à un autre.
- l'abandon complète de l'activité dans certains villages
- l'apparition de nouveaux villages abritant des activités maraîchères.

De tels phénomènes tendent à rendre de plus en plus obsolète la base de sondage et de ce fait impose la mise en œuvre d'un nouveau recensement maraîcher pour la campagne maraîchère 1999. En effet les 49 villages non touchés pendant la campagne 1996/97 (341 touchés pour 390 prévus) sont des villages dans lesquels la culture maraîchère n'est plus pratiquée et qui continuent de figurer dans la base de sondage au premier degré.

Au niveau du second degré la différence de 988 maraîchers non touché est essentiellement dues à des défections d'enquêteurs.

1.6.2.c : les estimations

Compte tenu des difficultés pratiques à effectuer des pesées effectives pour les productions des cultures à récolte échelonnée, les rendements publiés ont été calculés à l'aide d'une part, des superficies obtenues sur mesures effectives des planches et d'autre part, des productions obtenues par interview.
